

Radio-controlled wall clock Ø30 cm with strong aluminum frame and classic white dial

21315510

Radio-controlled wall clock in aluminum frame with glass front, white dial and black numbers. The built-in radio control ensures a constant, accurate display. The radio signal is sent from Frankfurt in Germany, and therefore covers most european countries within the timezone GMT+1. The range of the radio signal is approx. 1500 km.

**Battery:** Incl. 1 x AA

*The following countries in Europe are in the GMT + 1 time zone:*  
Albania, Andorra, Belgium, Bosnia and Herzegovina, Denmark, France, Netherlands, Italy, Croatia, Lichtenstein, Luxembourg, Macedonia, Malta, Norway, Poland, Switzerland, Serbia, Slovakia, Slovenia, Spain, Sweden, Czech Republic, Germany, Hungary and Austria.  
*Does not work in Iceland, the Faroe Islands and Northern Norway.*

**Note:** It can take up to 24 hours before the signal is found. This is because the watch's chip only searches for the signal 1-2 times per day to save the battery. This is a standard feature on most radio controlled clocks.
