

Refractometer Urine (Serum P. / Urine Sp. G / nD)

15305320

A refractometer is an optical measuring device used to measure the refractive index of various liquids. There are different types of refractometers, some of which are stationary and others handheld. However, they all work on the same principle of the refractive index of light.

With a refractometer you can measure the sugar content of fruit and malt, the water content of honey, the ability of antifreeze to keep liquids frost-free, the density of urine or the acid content of a battery. Likewise, a refractometer can measure saline solutions in seawater and the alcohol content of clear spirits or the alcohol solution in ex. IPA alcohol in geothermal heating systems.

Designed for clinical use and intended for both veterinary and human use. Provides a rapid and accurate indication of vital fluid levels and has a triple scale showing urine density (SG), total serum protein (SP) and refractive index (RI).

Equipped with Automatic Temperature Compensation (ATC), which automatically corrects temperature differences during use. Body of full copper, which makes this refractometer resistant to chemical corrosion, and the service life is increased many times compared to ordinary aluminum houses.

The refractometer has following specifications:

- Measuring range: 0-12g / dl / 1,000-1,050sg / 1.3300RI-1.3600RI

Product details	
Item no.	15305320
EAN	5708004075585
Customs tariff	9027899000
Sales Quantity	1

Product specifications	
Barcode	5708004075011
Resolution	0,2 g/dl / 0,005 sg / 0,0005 RI
Automatic temperature compensation (ATC)	Yes
Diameter Ø	40 mm
Length	170 mm
Measuring range	0-12g/dl / 1,000-1,050sg / 1,3300RI-1,3600RI
Material	Copper
Model	Urine
Accuracy	±0,2 g/dl / ±0,005 sg / ±0,0005RI
Product type	Refractometer
Gross weight	0.400 kg
Net weight	0.210 kg
